

1.6.1 GREASES FOR HIGH TEMPERATURES

1.6.2 LUBDECO 845 H.T.

DESCRIPTION:

Lubricating grease formulated with especially selected raw material and special compounds.

APPLICATION:

The application of these special greases can be considered as “universal”, since they have all of the application characteristics. Specifically in: extremely heavy and intermittent high load equipment with very good results because of its property. Without leakage temperature, these greases are ideal for lubricating equipment subject to work constant temperatures up to 270° C and not constant temperatures up to 300° C.

PROPERTIES:

- Good mechanical stability
- Excellent protection from erosion
- Excellent protection from oxidation
- Very good water washing resistance
- Very good adhesion
- No leakage point
- High Timken value
