

1.6.1 GREASES FOR HIGH TEMPERATURES

1.6.4 LUBDECO MOLY COPLES 3

DESCRIPTION:

New generation of lubricant greases with high technology applied for obtaining an exceptional lubrication at low and high revolutions of grid couplings.

Lubdeco moly coples 3 contains molybdenum disulphide for lowering friction in metals added to the additive package for providing outstanding results in contrast to another lubricant greases.

APPLICATION:

Lubdeco Moly coples 3 – Grease designed to be used only in grind couplings, at high and low revolutions.

ADVANTAGES:

- Cushion effect in metals
- Adherence when contacting metals
- Excellent mechanical stability
- Molybdenum Disulphide
- Free of additives with heavy or chlorinated metals
- Excellent protection from corrosion and rust
- Protection from extreme load
