

1.9.1 GEAR LUBRICANTS

1.9.2 GRAFOKATA ASENTAMIENTO SMP

DESCRIPTION:

Lubricating grease containing highly pure graphite which because of its particle size, can be spread, added to thick adhesive grant exceptional qualities.

PROPERTIES:

By using "GRAFOKATA ASENTAMIENTO" in new and used gears provides a higher contact between teeth (pinion and crown). Crests or machining marks tend to be minimized.

Use and application:

This product must not be used as service lubricator.

- Its application is through an automatic spread system
- Its application must be constant without intervals, with the higher amount to be measured.
- The required amount depends on the condition of the gear to be corrected.
- In furnaces of mills with one or two pinions.

1.9.3 GRAFOKATA 300 SMP

DESCRIPTION:

Lubricating grease designed with especially selected raw material and highly pure graphite.

APPLICATION:

This is used as protection when contacting sides of teeth, for the start up or the first revolutions of high dimension gears in furnaces and mills.

- Great protection from erosion
- Excellent adhesive grease
- Extreme pressure
- Cushion effect between constant effort surfaces
- High leakage point
