

## 2.1.1 LUBRICANTS FOR RAILROADS MECHANISMS

### 2.1.2 LUBDECO LUBRICADOR DE RIELES M

#### DESCRIPTION:

Lubricating grease specially used for lubricating rails with a highly pure solids content, which can provide a protection from erosion and friction.

#### ADVANTAGES:

Excellent mechanical and thermal stability, highly resistant to water washing, wide range of operation temperature. Stable lubricating film, stable for shock effect between metals.

### 2.1.3 LUBDECO TRACK LINES

#### DESCRIPCION:

Lubricating oil specially formed to be used on switch shaft with a high degree of highly pure solids to stay stable under critical temperature conditions.

It has a lubricating film imparting virgin oils with high viscosity used in its special development. This is special for switches.

#### ADVANTAGES:

- Adhering lubricating film
- Thermal stability
- Corrosion resistant
- Resistant to sudden changes in temperature
